Notice About Sycamore Trees

You may have noticed that some of our Sycamore trees and hybrids (London Plane trees) are not leafing out this spring. This is due to something called Sycamore anthracnose and is the result of a cool, wet spring. So what can be done? Nothing. The infections have already occurred and the damage is done. Infected trees will develop new foliage later this spring when temperatures are warmer and therefore unfavorable for disease development.

Please don't remove these trees. They are very much alive and thriving.

June Health and Wellness Tip of the Week

As the weather warms up, it's important to remember to:

Hydrate, hydrate, hydrate. Shockingly, it's estimated that 3 out of 4 Americans are walking around chronically dehydrated. This is bad news

considering that water makes up 60 - 70% of your body and affects every corner of health and well-being—including metabolism, detoxification, digestion, inflammation, appearance, and cognitive function to name a few. The solution? Drink at least 8 - 12 eight-ounce glasses of water per day. For added flavor and health benefit, add some fruit or veggies, such as lemon, strawberries & cucumber to name a few.
